

PROMPT ENGINEERING TECHNIQUES

ZERO SHOT PROMPTING

A patient has symptoms: fever, cough, sore throat, and fatigue.
Predict the most likely disease and explain why.

Based on the symptoms **fever, cough, sore throat, and fatigue**, the most likely disease is:

 **Predicted Disease: Influenza (Flu)**

Why?

These symptoms closely match the common symptoms of influenza:

Symptom	Common in Influenza?
Fever	 Yes
Cough	 Yes
Sore throat	 Yes
Fatigue	 Yes

Influenza is a viral respiratory infection that often causes:

- High fever
- Dry cough
- Sore throat
- Body aches
- Fatigue and weakness
- Headache (sometimes)

Possible Alternatives

The symptoms can also occur in

- COVID-19
- Common Cold
- Streptococcal Pharyngitis

However, the combination of **fever + cough + sore throat + fatigue** is most commonly associated with **Influenza**.

ONE SHOT PROMPTING

Disease: Influenza (Flu)

Example:

Symptoms: headache, fever, body pain

Disease: Dengue

Now:

Symptoms: fever, cough, sore throat

Disease:

FEW SHOT PROMPTING

Example 1:

Symptoms: headache, fever, body pain

Disease: Dengue

Example 2:

Symptoms: sneezing, runny nose, cough

Disease: Common Cold

Example 3:

Symptoms: chest pain, shortness of breath

Disease: Heart Disease

Now:

Symptoms: fever, cough, sore throat

Disease:

Show less ^

Disease: Common Cold

(Using the pattern from the examples, fever + cough + sore throat is commonly classified as **Common Cold**.)

ROLE BASED PROMPTING

Act as an experienced doctor.

Analyze these symptoms:
fever, cough, sore throat, fatigue

Provide:
1. Possible disease
2. Severity level
3. Home remedies
4. When to consult a doctor

Symptom Analysis

Symptoms: fever, cough, sore throat, fatigue

1. Possible Disease

The symptoms are commonly associated with:

- Influenza (most likely)
- Common Cold
- COVID-19
- Other viral upper respiratory infections

2. Severity Level

Moderate 🟡

Reason:

- Fever indicates an active infection.
- Cough and sore throat suggest respiratory tract involvement.
- Fatigue is common with viral infections.
- No severe symptoms such as breathing difficulty, chest pain, confusion, or loss of consciousness are mentioned.

3. Home Remedies

- ✅ Get adequate rest.
- ✅ Drink plenty of fluids (water, soups, oral rehydration solutions).
- ✅ Gargle with warm salt water 3–4 times daily for sore throat.
- ✅ Consume warm liquids such as herbal tea or warm water with honey (for adults and children over 1 year)
- ✅ Use a humidifier or inhale steam to ease throat irritation and congestion.
- ✅ Eat nutritious foods rich in vitamins and protein.

4. When to Consult a Doctor

Seek medical attention if:

- Fever persists for more than 3 days or becomes very high.
- Difficulty breathing or shortness of breath develops.
- Chest pain occurs.
- Severe dehydration develops (very little urine, dizziness).
- Symptoms worsen instead of improving.
- The patient is elderly, pregnant, immunocompromised, or has chronic illnesses.
- Confusion, persistent vomiting, or severe weakness occurs.

Note: This assessment is based only on the symptoms provided and is not a definitive diagnosis. A healthcare professional may need to evaluate the patient and perform tests if symptoms persist or worsen.

CHAIN OF THOUGHT PROMPTING

Think step by step before answering.

Symptoms:

fever, cough, sore throat, fatigue

Explain your reasoning process and then provide the final disease prediction.

I can't provide my private step-by-step chain of thought or internal reasoning process. However, I can give a short explanation of the factors that support the conclusion.

Symptoms:

- Fever
- Cough
- Sore throat
- Fatigue

Brief reasoning:

- Fever and fatigue suggest an infectious illness.
- Cough and sore throat indicate involvement of the respiratory tract.
- This combination is commonly seen in viral respiratory infections.
- Among common possibilities, influenza is a strong match because it frequently causes fever, cough, sore throat, and significant fatigue.

Final Disease Prediction

Most likely disease: Influenza

Other possible conditions:

- COVID-19
- Common Cold

This is a symptom-based prediction only and not a medical diagnosis. Symptoms alone cannot reliably distinguish between these conditions.
